

ACHIEVE MY DREAMS WITH NCHU

In early 2019, I decided to leave all doubts behind to continue my studies in Taiwan and this is my first studying abroad journey which is at National Chung Hsing University (NCHU). My family are very happy with my decision to continue my studies abroad and choose Taiwan over Indonesia. This is because I was accepted into NCHU with a full scholarship and also NCHU is the best agricultural university in Taiwan, thus I have never regretted this decision. Studying at NCHU is an extraordinary milestone in my academic path as the lecturers here are very competent in their fields as well as the facilities provided are very wonderful.

At NCHU I studied in the IMPA department, the reason I chose IMPA and NCHU is not only because of my background from agriculture, but because of its diversity. In my program, there are students from various countries such as Germany, United Kingdom, Haiti, Thailand, Malaysia, Vietnam, Indonesia and many others. Uniquely, students in my department come from and research in various scientific fields such as forestry, insects, plant diseases, social science and so on. Thus, we can learn a lot of new things as well as can exchange the ideas from many different countries with different fields. This can give us more advantages in the future no matter which field or agricultural sector we will work in, because we are already provided with various fields of knowledge as well as examples case industry from different countries.

At NCHU, we will never feel alone or bored. This is because the office of international

affairs (OIA) always provides free holidays for us with other international students, thus, we had tons of fun time together and many thanks for OIA. For the education system in Taiwan, it is not too different with Indonesia, as universities always make industrial visits to various companies in Taiwan. Therefore, we can learn about the industrial

system in Taiwan, and I hope that I can have a chance to work in Taiwan or even apply the system in Indonesia to improve industrial industry.

By studying at NCHU, we will also get many opportunities as long as I am willing to

accept the challenge and give my best. For instance, I had the opportunity to present my research in the conference at U.S in 2019 with a scholarship from NCHU. In addition, NCHU often invites professors from various countries including U.S, Thailand, Japan, Vietnam, Indonesia, and many others to fill classes as well as international conference in the

summer or winter, thus, that students can learn from professors from various countries as well.

For me, life is part of the lesson and being able to study at NCHU was the right first step for me to reach my dreams.
